## Thin layer chromatography

### HPTLC and GLP plates, silica gel 60, unmodified layers, glass backed

#### HPTLC plates, unmodified silica gel 60

This range of plates uses an optimised Merck silica gel 60 with a particle size of only 5 - 6 µm, which results in higher packing density and a smoother surface and therefore reduced band diffusion. Less sample is required, 0,1 to 0,5 µl than for classical TLC.

- Faster analysis, only 3 - 20 min for optimum separations
- 5 - 10 fold increased sensitivity compared to classical TLC
- Extra thin (100 µm) HPTLC automated multiple development (AMD) plates

#### HPTLC plates, concentrating zone

HPTLC concentrating zone plates that allow easy application of large volumes of diluted samples.

- Quick and easy sample application
- Includes a purification and concentration step

#### GLP plates

Laser coded GLP plates that are individually marked with item, batch and individual plate number. Based on the same proven Merck silica 60, GLP plates perform exactly as the corresponding TLC or HPTLC plates.

### HPTLC and TLC plates, silica gel 60, MS-grade

Coupling TLC plates to mass spectrometry is a new field of high interest, which will contribute strongly to the progress of planar chromatography. The MS-grade plates are much cleaner than standard TLC/HPTLC plates providing higher sensitivity and reduced background signals. This allows trace analysis with mass spectrometry detection in lower nanogram range.
